

IN THE SPECIFICATION

Please amend the specification by substituting the following amended paragraphs for paragraph [0035] of the originally filed application.

[0035] In the query task **205**, the process **200** determines when a size of a data structure exceeds a predetermined limit, which might be, for example, 32 kilobytes or 64 kilobytes, although larger or smaller limits are also useful and the user may have options for setting or re-setting such size limits. When the data structure to be handled exceeds the predetermined size limit, control passes to a block ~~[[210]]~~ **215**. When the data structure to be handled does not exceed the predetermined size limit, control passes to block ~~[[215]]~~ **210**.

Paragraph [0035], as amended and without mark-ups, is hereby provided below.

[0035] In the query task **205**, the process **200** determines when a size of a data structure exceeds a predetermined limit, which might be, for example, 32 kilobytes or 64 kilobytes, although larger or smaller limits are also useful and the user may have options for setting or re-setting such size limits. When the data structure to be handled exceeds the predetermined size limit, control passes to a block **215**. When the data structure to be handled does not exceed the predetermined size limit, control passes to block **210**.
